

Irrigation System

Please note: Only turn the irrigation system on at the ideal time you would like your plants to be watered daily. i.e early in the morning or late at night after customers have left.

If the water has been isolated or you would like to reset follow these simple steps:

- 1) Flip open the front lid to reveal the control units
 - 2) Ensure your tap or water supply is switched on
 - 3) Turn the dial to program 9 (15 mins every 24h)
 - 4) Wait 10 seconds, and the program will start
- a green light will flash and a few seconds later you will hear a "click".
 - Complete - well done. Any issues please contact Pub Plants using the details below
